RE: Air Quality Permit No. 20160/Huntsman Petrochemical Corp.

Dear Chief Clerk,

I am writing a letter in contest to the above referenced Air Quality Permit No. 20160 that Huntsman Petrochemical Corporation P.O. Box 847, Port Neches, TX. 77651 has published for in the Beaumont Enterprise as of 8-25-06.

I contest the aforementioned Air Quality Permit because the Huntsman Petrochemical Corporation does not have a current up to date environmental impact study for the migratory bird, and migratory insect, or the aquatic animals/mammals found in the Gulf of Mexico, which is where the particulates will end up falling with the prevailing wind patterns.

The Migratory bird and air current assessments are not current and will sadly infect the Bald Eagle population in the Eastern District of Texas, and the North Eastern District of Texas as well, when the wind patterns change to the respective locations. Said pollution in the for of the particulates described in the newspaper will cause eggshell thinness and fledgling damage in the Bald eagle, and other migratory birds. No, the Bald Eagle is not migratory, but it will be effected from the change in the weather patterns.

The Aquatic life aforementioned will be adversely effected when such discharged particulates come down in the Gulf of Mexico, and

7W

will harm all of the aquatic life from the crabs we eat to the  
protoplankton.

For the above aforelisted reasons I contest the Air Quality  
Permit for Huntsman Petrochemical Corporation, and request to be  
heard at a public hearing.

I thank you for your time in this matter.

Sincerely,

Adam Martin 39706-180
